

Application No.: 10/003773

Docket No.: TSQ-001RCE

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) In an electronic device, a method, comprising the steps of:
 - providing a plurality of entries containing data;
 - assigning an entry identification number ("entry ID") to each of said entries, each said entry ID being a unique value;
 - storing each entry indexed by its entry ID;
 - altering the data contained in a selected one of the plurality of entries or a label associated with a selected one of the plurality of entries to create a new entry, said new entry having an entry ID assigned;
 - cross-indexing said new entry with said selected entry;
 - updating a metastructure associated with said selected entry to reflect relationship changes caused by said new entry, said updating including ~~the~~ a time said selected entry was altered; and
 - displaying said new entry in response to requests for said selected entry.
2. (Currently Amended) The method of claim 1, comprising the further steps of:
 - parsing the data contained in said selected entry into segments;
 - assigning an item ID having a unique value to each of said segments; and
 - updating the metastructure of said selected entry to include a reference to said item IDs assigned to each of said segments.
3. (Original) The method of claim 2, comprising the further step of:
 - appending the parsed data from said selected entry to a journal, said journal being a data structure located in permanent memory.
4. (Currently Amended) The method of claim 1, comprising the further step of:
 - parsing said selected entry into segments;
 - attaching a label to at least one of said segments, wherein said label is cross-indexed with said segment, said selected entry and with a data structure referencing at least one other entries containing a segments with said label.
5. (Currently Amended) The method of claim 4 comprising the further steps of:
 - searching said plurality of entries based on said label; and
 - displaying ~~the~~ a results of said search on a web page, the result indicating that references entries from said plurality of entries that contain said label.

Application No.: 10/003773

Docket No.: TSQ-001RCE

6. (Original) The method of claim 1, comprising the further step of:
attaching a user-provided label to a user-defined part of said selected entry, said label being cross-indexed with said user-defined part, said selected entry and with a data structure referencing other entries containing said label.
7. (Original) The method of claim 6, comprising the further step of:
displaying a web page containing only said user-defined part of said selected entry.
8. (Currently Amended) The method of claim 6, comprising the further steps of:
searching said plurality of entries based on said label; and
displaying the results of said search on a web page, wherein said web page references indicates all of the entries from said plurality of entries that contain said label.
9. (Currently Amended) The method of claim 6, comprising the further steps of:
replacing said label with a ~~different~~ replacement label that is being cross-indexed with said ~~segment~~ user-defined part, said selected entry and a data structure of other entries containing segments with said replacement label;
indicating in said data structure holding the original label the time the original label is replaced; and
displaying said different label with said selected entry in response to requests for earlier versions of said selected entry which originally lacked said different label.
10. (Currently Amended) The method of claim 9, comprising the further steps of:
selecting a time slice to apply to said selected entry, said time slice corresponding to a period of time;
selecting a perspective to apply to said selected entry, said perspective being a date reference that controlling a selection of which labels to display with said entry; and
displaying said selected entry constrained by said time slice and said perspective.
11. (Currently Amended) The method of claim 9, comprising the further steps of:
setting the perspective to a specified date;
displaying the a net effect of all label additions and removals for said selected entry which took place by said specified date.
12. (Currently Amended) The method of claim 9, comprising the further steps of:
setting the perspective to a specified range of dates;

Application No.: 10/003773

Docket No.: TSQ-001RCE

displaying ~~the end~~ a result of ~~all~~ at least one label additions and at least one label removals for said selected entry which took place by the beginning of said specified range of dates; and

displaying ~~all of the~~ at least one label additions ~~taking that occurred place~~ during said specified range of dates.

13. (Original) The method of claim 9, comprising the further steps of:

setting the perspective to include all dates;

displaying the result of all label additions for said selected entry without displaying the effect of any label removals for said selected entry.

14. (Original) The method of claim 1, comprising the further steps of:

providing a permanent memory location

parsing the data contained within said selected entry; and

storing the parsed data in a permanent memory location.

15. (Original) The method of claim 14, comprising the further steps of:

storing a reference to at least one of, another entry, an update to said selected entry, and a labeling of said selected entry, in a metastructure stored in a data structure in said permanent memory location.

16. (Original) The method of claim 15 wherein said metastructure includes a grammar object, said grammar object expressing a ternary relationship among said data.

17. (Original) The method of claim 1 wherein said selected entry is an email message.

18. (Original) The method of claim 1 wherein said selected entry is an attachment to an email message.

19. (Original) The method of claim 1 wherein said selected entry is a web page.

20. (Original) The method of claim 1 wherein said selected entry is user-input text.

21. (Original) The method of claim 1 wherein said electronic device is interfaced with a network.

Application No.: 10/003773

Docket No.: TSQ-001RCE

22. (Original) The method of claim 1 wherein said data contained in said selected entry is audio data.

23. (Original) The method of claim 1 wherein said data contained in said selected entry is video data.

24. (Currently Amended) The method of claim 1 wherein said entry is a complete document that is not segmented prior to the assignment of an entry ID.

25. (Currently Amended) In a network, a method comprising the steps of:

storing a selected entry;

updating said selected entry to create a new entry;

updating a metastructure associated with said selected entry to reflect relationship changes caused by said new entry, said updating including a time said selected entry was altered;

cross-indexing said selected entry to said new entry, the new entry indicating ~~the~~ a time of the updating; and

displaying said new entry automatically via a document publishing system when said selected entry is selected by a user, said displayed new entry containing references back to said selected entry.

26. (Original) The method of claim 25, comprising the further steps of:

dividing said selected entries into user defined segments;

attaching a label to at least one of said segments, said label cross-indexed with said segment, said selected entry and an index holding references to entries containing said label.

27. (Currently Amended) In an electronic device, a medium holding computer-executable instructions for a method, said method, comprising the steps of:

providing a plurality of entries containing data;

assigning an entry identification number ("entry ID") to each of said entries, said entry ID being a unique value;

storing each entry indexed by its entry ID;

altering data in a selected one of said plurality of entries or a label associated with a selected one of the plurality of entries to create a new entry, said new entry having an entry ID assigned, the new entry cross-indexed with said selected entry;

updating a metastructure associated with said selected entry to indicate ~~the~~ a time said selected entry was altered; and

displaying said new entry in response to requests for said selected entry.

Application No.: 10/003773

Docket No.: TSQ-001RCE

28. (Original) The medium of claim 27 wherein said method comprises the further steps of:
parsing said selected entry into segments;
assigning an item ID having a unique value to each of said segments; and
updating the metastructure of said selected entry to include a reference to said item ID.
29. (Original) The medium of claim 28, wherein said method comprises the further step of:
attaching a label to at least one of said segments, said label cross-indexed with said segment, said selected entry and with a table of other entries containing segments with said label.
30. (Currently Amended) In an electronic device, a method comprising the steps of:
providing a plurality of entries containing data, said data including labels referencing segments of said data;
cross-referencing a selected one of said plurality of entries with at least one different version of said selected entry;
storing in a data structure associated with said selected entry ~~the a~~ time said labels became associated with said selected entry;
storing in said data structure associated with said selected entry the time said at least one different version became associated with said selected entry;
selecting a time slice to apply to a selected entry, said time slice corresponding to a period of time;
selecting a perspective to apply to said selected entry, said perspective being a date reference controlling which labels to display with said entry; and
displaying said selected entry constrained by said time slice and said perspective.
31. (Currently Amended) In an electronic device, a method, comprising the steps of:
providing a plurality of entries containing data, said data including labels cross-indexed with segments of said data, each said entry having an associated metastructure that is updated to reflect a time of an alteration of an associated entry or a label associated with the entry;
searching said plurality of entries based on said label; and
displaying the results of said search in a document referencing other entries from said plurality of entries that contain said label, each of the entries indicating ~~the a~~ time the label became affixed to the entry.

Application No.: 10/003773

Docket No.: TSQ-001RCE

32. (Currently Amended) The method of claim 1, wherein the altering of the label is ~~the~~a removal of the label.

33. (Currently Amended) The method of claim 1 wherein the altering of a label is ~~the~~an addition of a label.

34. (Previously Presented) The method of claim 1, comprising the further steps of:
removing a label associated with one of the plurality of entries; and
adding a label associated with said one of the plurality of entries.
